by Terry A. Rondberg, D.C.

A shocking expose of the dangers of modern medicine. A "must read" for all health care consumers. These are the fully documented reports that the medical and pharmaceutical industries don't want people to read!

Reviewer: A reader from Mesa, Arizona

The newspapers love to have stories about the latest medical "miracle," but they never tell us about *these* research reports -- from medical journals like the Journal of the American Medical Association, the New England Medical Journal, etc.

Reading this book opens your eyes to what's really going on in the medical and pharmaceutical industries. It's scary stuff, but everyone should read it before they take another pill, step into another M.D.'s office, have their kids vaccinated, or agree to surgery or medical treatment. At least you'll know what you're getting yourself into.

Reviewer: A reader from Charlotte , NC

If you think you are safe at the MD's office read this book. We are being lied to for the sake of big business. Hundreds of studies are listed in this book, check them out and possibly save the life of someone you love.

Shocking eye-opener May 8, 2000

For anyone who wants to know the truth about bad medicine! February 9, 1999

Reviewer: A reader from Chicago

We have all been lied to by the media and the public relations army paid for by the medical/pharmaceutical industries. Now you can learn what most people never know from medicines own research. This well referenced book could save you or a loved ones life. I really appreciate the fact that it lists all of its sources, from scientific peer-reviewed journals, which adds greatly to the books credibility. You can download this book [here](#)
